C. Bitwise Balancing

time limit per test: 2 seconds

memory limit per test: 256 megabytes

You are given three non-negative integers b , c , and d .

Please find a non-negative integer $a \in [0, 2^{61}]$ such that $(a \mid b) - (a \& c) = d$, where \mid and $\&$ denote the bitwise OR operation and the bitwise AND operation, respectively.

If such an a exists, print its value. If there is no solution, print a single integer -1 . If there are multiple solutions, print any of them.

Input

Each test contains multiple test cases. The first line contains the number of test cases t ($1 \leq t \leq 10^5$). The description of the test cases follows.

The only line of each test case contains three positive integers b , c , and d ($0 \leq b, c, d \leq 10^{18}$).

Output

For each test case, output the value of a , or -1 if there is no solution. Please note that a must be non-negative and cannot exceed 2^{61} .

Example

input

```
3
2 2 2
4 2 6
10 2 14
```

[Copy](#)

output

```
0
-1
12
```

[Copy](#)

Note

In the first test case, $(0 \mid 2) - (0 \& 2) = 2 - 0 = 2$. So, $a = 0$ is a correct answer.

In the second test case, no value of a satisfies the equation.

In the third test case, $(12 \mid 10) - (12 \& 2) = 14 - 0 = 14$. So, $a = 12$ is a correct answer.

Codeforces Round 976 (Div. 2) and Divide By Zero 9.0

→ Virtual participation

Virtual contest is a way to take part in past contest, as close as possible to participation on time. It is supported only ICPC mode for virtual contests. If you've seen these problems, a virtual contest is not for you - solve these problems in the archive. If you just want to solve some problem from a contest, a virtual contest is not for you - solve this problem in the archive. Never use someone else's code, read the tutorials or communicate with other person during a virtual contest.
